

## ART 6.4.1.1 Perform Target Detection

Characterize detected objects as friend, enemy, or neutral. In combat operations, discriminate between recognizable objects as being friendly, neutral, or enemy, or the name that belongs to the object as a member of a class. Identify a recognized object and the specific designation of that object to determine to the extent that firing or other tactical decisions concerning it could be made. This aspect of combat identification is time sensitive and directly supports a combatant's shoot or don't-shoot decision for detected objects on the battlefield.(FM 3-20.15) (USAARMC)

NO.	Scale	Measure
01	Yes/No	Unit classified detected object as friend, foe, or neutral.
02	Yes/No	Unit determined threat level of object.
03	Percent	Of objects detected.
04	Percent	Of objects not detected.
