

## ART 2.1.2.1 Conduct Intelligence Reach

Intelligence reach is a process by which intelligence organizations proactively and rapidly access information from, receive support from, and conduct direct collaboration and information sharing with other units and agencies, both within and outside the area of operations, unconstrained by geographic proximity, echelon, or command. Intelligence obtained through intelligence reach helps the staff plan and prepare for operations and answer commander's critical information requirements without the need for the information to pass through a formal hierarchy.
